# A REPORT ON THE PROJECT " URL SHORTENER "

**Name :** Harikishore B
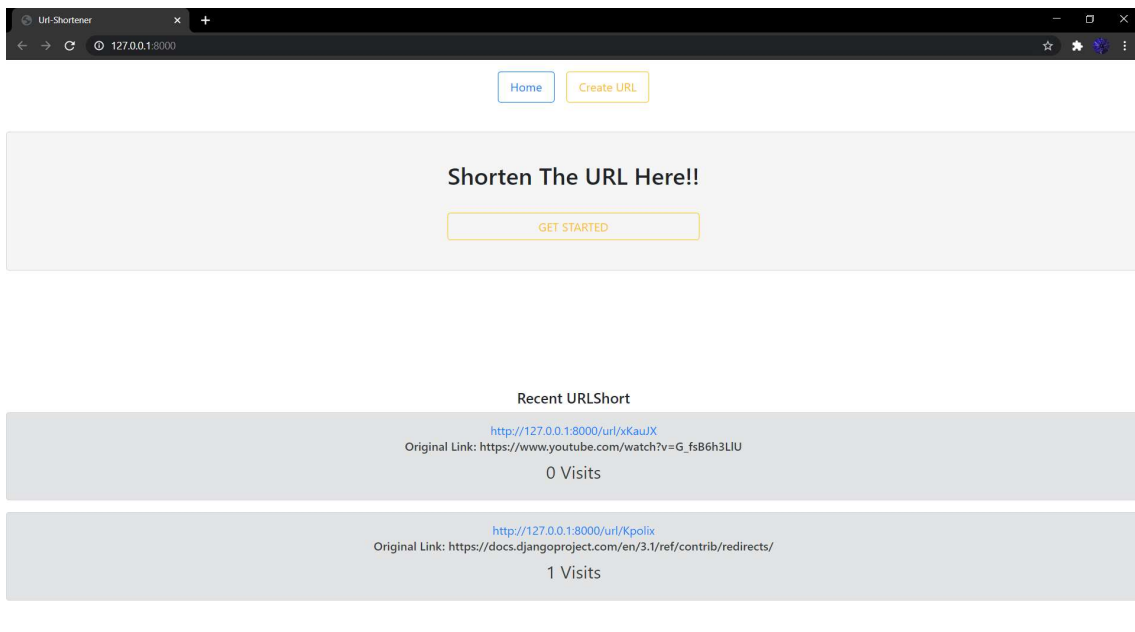

**Project Name** : URL Shortener

**Project Description** : Created a website where We can Customize and Shorten Our Long URL

**Technology Used :** Django Framework, HTML , CSS

**Report :**

HOME PAGE:

The Primary function of the website is to shorten the Long URL .
Furthermore, in Home page it shows Recently created URL with Number of Visits
Visits tell us How many times user clicked the shorten URL

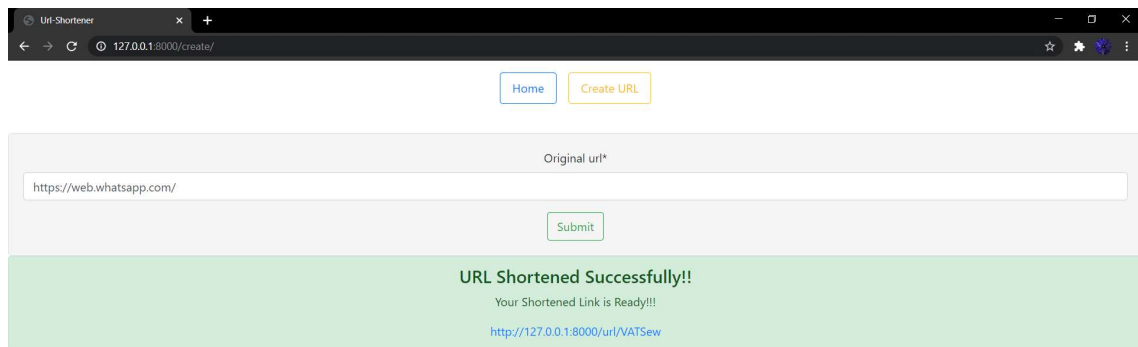

CREATE URL PAGE:
Here , User Can Paste the long original URL and get shortened URL

After User submits the Long URL , It will Show up the Success message with the URL created .
Now, User Can Click on the Shorten URL and it will Redirect the user to Original URL for it is shorten

No Response Page :

If the User route to not created URL , User can find no page found message

**OOPS! Page Not Found :(**

Create URL
